

Research methods report feedback

June 19, 2024

Name author(s):

Title report:

Overall score:

1 Research question(s)

Score:

- Is the subject clearly delineated?
- Are the research question(s) formulated clearly and succinctly?
- Are the concepts used formulated and defined clearly?
- Is the societal and scientific relevance of the research question argued/demonstrated adequately?
- Is adequate justification given for the choices made in formulating the research question?
- Is the problem posed relevant, subject of debate and original?

2 Literature

Score:

- Is the literature that is described relevant in the framework of the research question?
- Does the literature that was used describe the state-of-the-art in the area?
- Are the techniques used in the research described in sufficient detail?
- Is a critical attitude taken in processing the literature (identifying relationships, contradictions, gaps or inconsistencies in the literature)?
- Are insights from the literature used in the research?

3 Method

Score:

- Is the description of the method(s) clear and adequate?
- Is a further explanation/clarification given why this method was chosen rather than others?
- Is the research set-up valid and sufficiently specific considering the research question?
- Is data collection performed adequately (operationalisation of concepts, instrumentation, research techniques, choice of the empirical field)?

4 Results

Score:

- Are the results – qualitative or quantitative – presented in an orderly fashion?
- Are tables, figures, diagrams or overviews used in a well-considered way?
- Are the data analysed further using qualitative and/or quantitative analysing techniques that fit the research method(s) chosen?
- Is there a certain originality of the methodology applied in the research?
- Is the research merely descriptive or is there in-depth analysis, too?

5 Conclusions/discussion

Score:

- Does the report contain clear and well-founded conclusions?
- Do the results and the conclusions link up well with the research question?
- Are results and conclusions put into context of existing scientific knowledge? Does the report provide new insights?
- Is attention paid to the generalisability of the results, and the practical and theoretical implications of the conclusions?
- Is a critical attitude taken and expressed with regard to the research conducted and the results found?
- Are relevant suggestions for further research formulated?

6 Structure

Score:

- Is the report and its component parts structured clearly and logically?
- Does the report contain a clear cohesion between the various parts?
- Is every part structured in a well-balanced and clear way?
- Are main issues clearly separated from side issues?
- Is the report conceived independently, or is it a collection of studies and quotations?

7 Form and Presentation

Score:

- Is the length/number of pages appropriate, i.e., does this size fit the content?
- Does the text contain many or few typographical or stylistic errors?
- Does the text read well?
- How is the quality of the written language (style, choice of words, spelling, etc.)
- Is adequate use made of notes and/or appendices?
- Are the quotations, references and sources cited correct and complete?
- Is the bibliography ok? Are the references complete?
- Is the division into paragraphs and sections consistent?
- Is the quality of the summary/abstract ok?

8 Responsible

Score:

- Were the most relevant ethical aspects of the research identified and analysed?
- Is sufficient critical attitude towards the research results taken?
- Is the research reproducible, and if not, is this sufficiently justified? (e.g., availability of code / anonymous data on git / OSF)
